

Eco-Gel™

Eco-Gel™ is a proprietary (patent pending) water additive that is instantly transformed into a highly effective firefighting hydrogel when introduced into a water stream at concentrations ranging from 2 to 5% by volume.

Eco-Gel™ overcomes the performance and environmental limitations of standard firefighting foams by producing a novel firefighting hydrogel that:

- *knocks down Class A and B fires*
- *clings to vertical and horizontal surfaces*
- *creates a safe egress path*
- *can form a fire break for bush and grass fires*
- *prevents re-ignition*

Eco-Gel™ is the only firefighting water additive certified by UL and the US Department of Agriculture (USDA) to be 100% bio-based.

Packaging Configurations

16-gallon (60L) drum
30-gallon (112L) drum
55-gallon (200L) drum
